Pervasive Personalized Intelligence

An Industry-University Collaborative Research Center

The **Pervasive Personalized Intelligence Center** is a partnership between the **University of Colorado Boulder**, **Oregon State University** and the **National Science Foundation** with support from top industry leaders. Operating under the Industry-University Cooperative Research Centers model, the center supports growth in **Internet of Things** systems that push Pervasive Personalized Intelligence to the edge of the network.

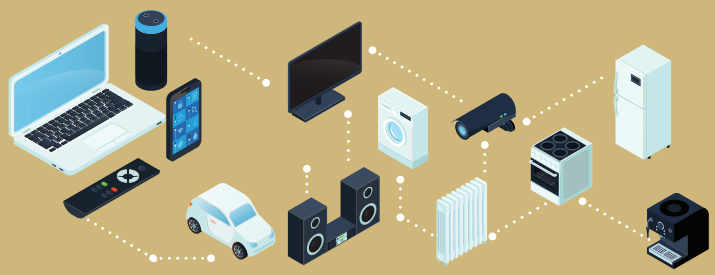
The pre-competitive and industry-applied research projects within the center will enable an entirely new class of applications with intelligence that is predictive instead of reactive, making processes more efficient. Partners enjoy opportunities to collaborate on shared, industry-wide challenges and further leverage federal research dollars. They also engage regularly with industry-ready students, work with world-class experts and gain credibility without doing all of the vast work to gain momentum and build a team from scratch.

Virtual Launch Workshop

About: Connect with our team, current members and peers to discuss the future of the center

When: Sept 14, 2020

Registration (and information about other upcoming events): ppicenter.org



Industry Partners

- Daimler Trucks North America
- Dell Technologies
- Galois
- Intel
- Itron
- NEC Corporation
- Trimble

Contact us to set up a discovery meeting with one of the center directors to see how your organization can leverage the **Pervasive Personalized Intelligence Center**.
